

2011 Application Guidelines

1. Not more than one application per institution in each of the three grant type categories will be funded. Applications received after February 1, 2011 will not be considered.
2. A team of research experts led by Dr. Michael Meyers will review the proposals and make recommendations to the trust. Awards will be announced during the month of May 2011. Special consideration will be given in two areas: 1) emerging novel concepts that constitute significant innovation and 2) new investigators in the field of melanoma.
3. Applications will be accepted for a broad range of melanoma research projects involving basic science, clinical trials, etc.
4. Applications from non-profit organizations under the U. S. Internal Revenue Code Section 501 (c) (3) are eligible for consideration. If a grant recipient is a foreign entity not under the U. S. Internal Revenue Code, an Affidavit related to non-profit status must be completed prior to payment of grant funds. The Affidavit is available on request.
5. The funding is considered a research grant, and The Harry J. Lloyd Charitable Trust funds cannot be applied to institutional overhead, indirect costs, or other organizational levies.
6. Applications should be in narrative form and can be no longer than five typewritten pages in length. Additional supportive attachments are acceptable, but they must be pertinent.
 - A. An investigator form is required for each named investigator.
 - B. Biographical sketches (NIH format or short form) are required for all research personnel.
 - C. Include a justified budget (NIH format) for the proposed project.
 - D. Please submit twelve sets of your proposal and all attachments.
 - E. Fill out the appropriate award application sheet.
7. Because the Lloyd Trust board of trustees believes that all of life is infused with great value, the following ethical guidelines apply to all grants.
 - A. Recipients will use animals in research only when non-animal options are not available and when the use of animals helps answer significant scientific questions. Recipients will make every effort to minimize distress and pain experienced by the animals.
 - B. Recipients will not use embryonic or fetal cell culture tissues systems in any research funded by the Lloyd Trust.
 - C. The use of transgenic animal models in which human genes are inserted into the germ line requires advanced approval by the trust.
8. Copies of the Conditions of Grant agreement are available upon request.
9. Grant recipients will be asked to submit a brief written report at the end of the funding period.
